

$$\leftarrow (x^3 - y^3) = (x - y) \cdot (x^2 + xy + y^2).$$

$$(1). \lim_{x \rightarrow 2} \frac{x^3 - 8}{x - 2} = \lim_{x \rightarrow 2} (x^2 + 2x + 4) = 12.$$

$$= \lim_{x \rightarrow 2} \frac{3x^2}{1} = 12.$$

$$(2) \lim_{x \rightarrow +\infty} \frac{x^{2025} + x^{2024} + 1000}{1.01^x} = 0.$$

用 2025 次洛必达达之后, 分子是 $2025!$, 分母 $\cdot (1.01)^x [\ln(1.01)]^{2025}$

$$\text{分母: } [(1.01)^x]' = (1.01)^x \cdot \ln(1.01)$$

$$(3) \lim_{x \rightarrow \infty} \frac{x^{2025} + 2025 \cdot x^{2024}}{(2x + 1)^{2025}} = \lim_{x \rightarrow \infty} \frac{1 + 2025 \cdot \frac{1}{x}}{(2 + \frac{1}{x})^{2025}}.$$

$$= \frac{1}{2^{2025}}.$$

分子分母都除以 x^{2025}

$$(4). \lim_{x \rightarrow 0^+} \sqrt{x} \sin \frac{1}{x} = 0. \quad \text{用三明治定理.}$$

$$-1 \leq \sin \frac{1}{x} \leq 1. \Rightarrow -\sqrt{x} \leq \sqrt{x} \sin \frac{1}{x} \leq \sqrt{x}$$

$\sqrt{x} > 0.$

$$(5). \lim_{x \rightarrow +\infty} \sqrt{x^2 + x} - x = \lim_{x \rightarrow +\infty} \frac{(\sqrt{x^2 + x} - x) \cdot (\sqrt{x^2 + x} + x)}{\sqrt{x^2 + x} + x}$$

$$= \lim_{x \rightarrow +\infty} \frac{x}{\sqrt{x^2 + x} + x} = \lim_{x \rightarrow +\infty} \frac{1}{\sqrt{1 + \frac{1}{x}} + 1} = \frac{1}{2}.$$

$$(6). \lim_{x \rightarrow 0} \frac{(e^{ax}-1)^3}{\sin 2x \cdot \tan 3x \cdot 6x \tan x}$$

$$= \frac{(ax)^3}{2x \cdot 3x \cdot x} = \frac{a^3}{6}.$$

$$(7). \lim_{x \rightarrow 1} (2-x)^{\tan \frac{\pi}{2} x}.$$

$$\text{先求 } \lim_{x \rightarrow 1} \ln(2-x)^{\tan \frac{\pi}{2} x} = \lim_{x \rightarrow 1} \tan \frac{\pi}{2} x \cdot \ln(2-x),$$

$$\stackrel{t=x-1}{=} \lim_{t \rightarrow 0} \tan \frac{\pi}{2} (t+1) \cdot \ln(1-t) = \lim_{t \rightarrow 0} - \frac{\ln(1-t)}{\tan \frac{\pi}{2} t} = \lim_{t \rightarrow 0} - \frac{(-t)}{\frac{\pi}{2} t}.$$

$$= \frac{2}{\pi}.$$

$$\therefore \lim_{x \rightarrow 1} (2-x)^{\tan \frac{\pi}{2} x} = \lim_{x \rightarrow 1} e^{\ln \sim} = e^{\lim_{x \rightarrow 1} \ln \sim} = e^{\frac{2}{\pi}}.$$

$$(8). \lim_{x \rightarrow 1} \frac{1}{x-1} - \frac{3}{x^3-1} = \lim_{x \rightarrow 1} \frac{x^3+x+1-3}{x^3-1} = \lim_{x \rightarrow 1} \frac{x^3+x-2}{x^3-1}$$

①. 不用洛必达.

$$= \lim_{x \rightarrow 1} \frac{(x-1) \cdot (x+2)}{(x-1) \cdot (x^2+x+1)} = \lim_{x \rightarrow 1} \frac{x+2}{x^2+x+1} = \frac{3}{3} = 1.$$

②. 用洛必达.

$$= \lim_{x \rightarrow 1} \frac{x^3-1-3(x-1)}{(x-1)(x^3-1)} = \lim_{x \rightarrow 1} \frac{x^3-3x+2}{x^4-x^3-x+1}$$

$$= \lim_{x \rightarrow 1} \frac{3x^2-3}{4x^3-3x^2-1} = \lim_{x \rightarrow 1} \frac{6x}{12x^2-6x} = \frac{6}{12-6} = 1.$$

(9). $\lim_{x \rightarrow 2024} f(x) = 0, \lim_{x \rightarrow 2025} f(x) = 0.$

$$\therefore f(x) = \begin{cases} 0 & \text{if } x \notin \mathbb{Z} \\ (-1)^x & \text{if } x \in \mathbb{Z} \end{cases}$$

$\therefore$ 当 $x \neq 2024$, 且 x 在 2024 附近时,

$f(x)$ 都是 0. 如右图:

用定义证明 $\lim_{x \rightarrow 2024} f(x) = 0$:

$\forall \varepsilon > 0$, 取 $\delta \leq 1$. 则当 $0 < |x - 2024| < \delta$ 时, $|f(x) - 0| = |0 - 0| = 0 < \varepsilon$.

(10). $f(x) = \begin{cases} x, & (x \neq 0) \\ 1, & (x = 0) \end{cases}$

$\lim_{x \rightarrow 0} f(x) = 0 \neq f(0) = 1.$
